"Genome sequence of the endocellular bacterial symbiont of aphids
Buchnera sp. APS.";
Nature 407:81-86(2000).
-!- FUNCTION: CATALYZES THE FIRST STEP IN HEXOSAMINE METABOLISM,
CONVERTING FRUCTOSE-6P INTO GLUCOSAMINE-6P USING GLUTAMINE AS
NITROGEN SOURCE (BY SIMILARITY).
-!- CATALYTIC ACTIVITY: L-glutamine + D-fructose 6-phosphate = L-
glutamate + D-glucosamine 6-phosphate.
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: IN THE C-TERMINAL SECTION; BELONGS TO THE SIS FAMI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        16-OCT-2001 (Rel. 40, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY ILIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS: PROTEIN B. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.

PROTEIN C AND MRNA. NONSTRUCTURAL PROTEINS NS1 PRESENTS TWO ALTERNATIVE CLEAVAGE SITES FOR ITS C-TERMINUS, WHICH MAY DEFINE SOLUBLE OR A MEMBRANE-BOUND FORM OF NS1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            FUNCTION: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARI HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCT: NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the con

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
